3D printing process:

3D printing (additive manufacturing) is a process of creating three-dimensional objects by joining successive layers of material. The process involves a digital model of the object, which is sliced into thin layers. A laser or other energy source is used to melt or cure the material layer by layer, building up the object from the bottom up. The process can be used to create a wide range of parts, from simple geometric shapes to complex, multi-layered structures. The process is highly flexible and can be used to create parts that are difficult or impossible to manufacture using traditional methods. The process is also highly accurate and can produce parts with very tight tolerances. The process is also highly scalable and can be used to produce large quantities of parts.

Quality Management System of the above organization has been assessed and found to be
in accordance with the requirements of the standard:
GB/T19001-2016 / ISO9001:2015

SCOPE OF CERTIFICATION/REGISTRATION

The Research and Development and Production of Optics Lenses (Except the limits of national laws and regulations.)

This certificate is made valid when used with certification scopes and the requirements of applicable laws and regulations. These requirements include, but are not limited to, administrative permits, scopes of qualifications, and CCC requirements.

Subject to operation conditions in requirements conformity with Quality Management System,

This Certificate is valid for a period of three years only,
Date from: Mar 13th, 2019 To: Mar 12th, 2022

The effectiveness of this Certificate shall be Validated by periodic surveillance audit of ZLTR for maintenance.
