

Product Information

Beam expanders (also called collimators) are commonly used in systems with long beam paths to keep the beam collimated, or to change the focal spot size of a focusing lens. Different magnifications can also be achieved, but it is necessary to ensure that the input and output beams pass through the aperture. Beam expanders are suitable for a variety of applications including: interferometry, laser scanning, and remote sensing, to name a few.

CARMANHAAS is professional china [Laser Beam Expander Lens Manufacturer](#) to offer good working performance laser marking machine, to be leader supplier in china with best price.
