

Product Information

Product Description:

Stainless steel material is widely used in various fields, such as construction, kitchen appliance, electronic equipment, vehicles and so on. At present, the stainless color marking application in China has been used by increasingly manufacturers.

Carmnhaas as professional laser machine supplier in china, offer you the laser technical support to achieve different color on Stainless steel. Only a few minutes, the stainless-steel surface can have a variety of beautiful patterns, not only improve the aesthetic value, but also provides more possibilities for the application of stainless steel in life, and create another era of laser marking.

Product Principe:

Carmnhaas laser color marking machine principle of stainless steel material color laser marking is using thin-film analyzer to analyze the stainless-steel laser painted surface and found that a thin-film will be produced on the surface of stainless steel under the action of laser. Because when light hits the surface of the film after the laser action is shown in the figure below, different colors are generated. What kind of light is strengthened when it interferes depends on the thickness of the stainless steel oxide film, When the light of one of the colors is intensified, the surface of the thin film shows the enhanced color.
