Product Description:

SLM optical system supplier china, Selective laser melting, or SLM, is a type of metal additive manufacturing or 3D printing. Often, the terms SLM and direct metal laser sintering (DMLS) are used interchangeably. However, the two technologies differ slightly, in that SLM melts pure metals while DMLS fuses metal alloys.

SLM is one of the most exciting 3D printing technologies available today and is utilized both for rapid prototyping and mass production. The range of metal alloys available is fairly extensive. The end result has properties equivalent to those manufactured via traditional manufacturing processes.

CARMANHAAS could offer customer the optical system mainly includes QBH optical module, Galvanometer Scanner and F-THETA scan lens, Beam expander, Protective Window, etc. The Power could reach 1000W (Single Mode Laser).

Advantages:

- (1)Power up to single mode 1KW;
- (2)Long-term stability, low temperature drift;
- (3)The fastest scanning speed is up to 5000mm/s;
- (4)Precise positioning with resolution up to 1um.
