

Product Information

Laser reflection mirror used in the laser cavity as end mirror or foldmirror, and in the beam delivery as reflective mirror. Substrate is typically silicon, Cu and Mo. Silicon is the most commonly used mirror substrate due to its good "figure of merit" properties. Cu because of its high thermal conductivity is generally used in high-power laser systems. Mo-resistant surface suitable for the specific needs of the physical environment, it is generally uncoated. In the low-power laser cavity, such as Glass tube and RF tube, end mirror commonly used silicon, the radius of curvature can be customized according to customer demand.
